Dear Hiring Manager,

I am applying for the [ROLE TITLE] role because I lead engineering teams that deliver AI platforms, AI-first design systems, and customer-facing platform programs with measurable outcomes. I bring a blend of engineering management, product thinking, and practical AI fluency: turning ambiguous problems into executable roadmaps, aligning cross-functional teams, and driving delivery while protecting quality, reliability, and customer trust.

Most recently at Adobe, I lead teams across engineering, ML, and QA delivering GenAI typography and editing capabilities across creative products and shared platforms. My recent work includes AI-assisted design correction systems, a newer AI-first agentic typography initiative using LLM-driven reasoning and multimodal layout analysis, scalable evaluation loops, MCP-based workflow integrations, and AI infrastructure across AWS and Azure. I focus on translating emerging AI capabilities into reliable product and platform outcomes through clear priorities, strong partner alignment, and decision-grade metrics.

Previously at Moderna, I led product strategy and engineering delivery for mChat, an internal LLM-powered GenAI productivity platform adopted by 75% of users and referenced externally in an investor call. I helped build a secure reusable GenAI foundation using AWS, API-based integrations, vector and semantic retrieval, hybrid RAG evaluation, and multimodal capabilities including image-creation workflows. That experience strengthened my ability to lead AI systems in regulated and privacy-aware environments where adoption, trust, and execution discipline matter.

Earlier at Tableau and Microsoft, I delivered platform and customer-facing product work across developer APIs, cloud migration, data visualization, performance, test automation, and cross-platform text technology. I also continue to invest in AI product and operational excellence through IBM AI Product Manager, Six Sigma Green Belt, Privacy Law and HIPAA, and cloud and AI certifications.

What I will bring to [COMPANY] is a steady delivery engine: crisp prioritization, strong cross-functional partnership, technical depth in AI, cloud, and platform systems, and teams that execute with urgency while preserving reliability and customer trust. I would welcome the opportunity to discuss how I can help your organization deliver impactful products at scale.

Sincerely,

Ameen Demiry (Mohamed Ibrahim)
